The Next Evolution in Internal Risk Management

Protect your most sensitive applications while increasing operational efficiency with Bottomline and Trellix

Reinforce Your Defenses with Next Level Visibility

Challenges

Reactive, point solutions aren't adaptive enough for today's risk environment.

- Incomplete visibility into user access of sensitive data, especially with legacy systems such as mainframes
- Numerous point solutions create investigation inefficiencies
- Lack of context across the threat landscape

Solution

Bottomline and Trellix offer holistic protection for managing internal threats.

- Go deeper and monitor events not covered by audit logs
- See the complete picture across applications with all relevant context
- Manage mutliple risk types from a single command center

The threat landscape is constantly evolving. The methods of malicious actors become increasingly aggressive and complex with each year. Meanwhile, the prevalance of remote and hybrid work adds new threat vectors that need to be taken into account.

With so many variables, your risk management strategy needs to be adaptive and holistic. The Bottomline Record and Replay solution in conjunction with Trellix Helix can help with that.

Cross-platform, real-time insights with Bottomline

Bottomline's patented Record and Replay solution provides unparalleled visibility into your most sensitive application. The solution non-invasively monitors network traffic for mainframe and web applications, creating a normalized view of the user journey.

Traditional log monitoring is often inefficient and ineffective. Logs can be incomplete and missing view only actions. They are also typically monitored on a batch basis meaning suspicious activity is raised after the fact. By directly tapping the network, Record and Replay overcomes those challenges and provides real-time protection for your most sensitive applciations.

Captured data is normalized across applications and displayed using a screen by screen visual replay. This provides investigators complete visibility into suspicious activity enabling the most timely resolutions possible and has been shown to reduce investigation time by up to 90%.

Full circle risk management with Bottomline and Trellix

Bottomline's Record and Replay solution is directly integrated with Trellix Helix. This creates a single command center for your risk management processes.

> ## Enable the most timely resolutions possible and reduce investigation time by up to 90%

Coupling Bottomline's user monitoring with Helix's security insights and analytics provides customers with the full context for any investigations. These insights are then reinforced with Bottomline's visual replay of user activity. The result is detailed risk management insights and expedient investigations when anomalies are detected.
