

# Promoting diversity to close the cybersecurity talent gap

Trellix commissioned a survey of 1,000 cybersecurity professionals around the world to get a better sense of our talent shortage.

Here are some findings from our study:

## TODAY'S CYBERSECURITY WORKFORCE

**The demographic dilemma**  
Our industry is largely homogenized.

**College or bust**  
The industry has come to believe cybersecurity experts require higher education.

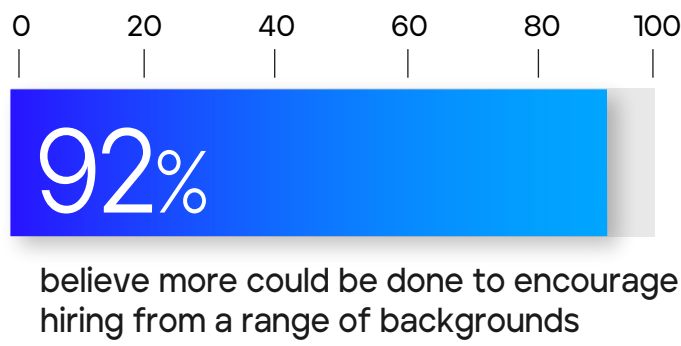

**Cybersecurity lifers**  
Most cybersecurity pros have spent their entire careers in the industry.

## TOMORROW'S CYBERSECURITY WORKFORCE

**Building a bigger tent**  
Diverse perspectives would strengthen cybersecurity.

**No degree necessary**  
What people really need are certifications and vocational training—plus a passion for protecting people.

**The move to soulful work**  
People from a variety of fields—from retail to marketing to social media—have successfully transitioned to cybersecurity.

## Championing the cause

Trellix is committed to solving cybersecurity's diversity and talent gap. Through partnerships with Gotara and the Hispanic Alliance for Career Enhancement, we're creating pathways for more women and Latinos to blaze their own trails in our industry.

And by providing a powerful XDR platform, we're making cybersecurity a more attractive, rewarding place to spend an entire career. Delivering technologies that learn and adapt enables SecOps employees to work more efficiently and effectively—decreasing stress and minimizing attrition.
