

Trellix Email Security for Microsoft Office 365

Step up your email defense
while decreasing your spend.

Benefits

- Reduce the risk of email-borne threats
 - Superior protection without the premium license cost
 - Seamlessly protect Microsoft Office 365 with cloud-native API-enabled integration
 - Automatically extract emails weaponized post-delivery
 - Inspect and block malicious objects shared via Sharepoint, Teams, and Slack
- 

It only takes one email to breach an organization.

Email continues to be the most successful attack vector. Over 90% of cyberattacks begin with email-borne techniques such as phishing, business email compromise, and executive and vendor impersonation. Cybercriminals use targeted social engineering to trick users into opening compromised attachments or clicking on malicious URLs that steal credentials. It only takes one malicious email to breach your organization, putting corporate and customer assets at risk.

And as companies use Sharepoint, Teams and Slack to transform employee and partner collaboration, threat actors are already exploiting this largely unprotected attack vector.

Microsoft users are not stepping up

In an effort to simplify operations, many organizations have moved to Microsoft 365 Enterprise, with the vast majority opting for the Microsoft 365 E3 license.

Microsoft encourages E3 users to 'step-up' their security and compliance capabilities by offering the Microsoft 365 E5 Step-up package, along with two subsets: Microsoft 365 E5 Security and Microsoft 365 E5 Compliance. Unfortunately, premium pricing puts these packages out of reach for most budgets.

For organizations opting to focus solely on Office 365 E3 protection, Microsoft offers Microsoft Defender for Office 365 Plan 1 and Plan 2, bundles within the Microsoft E5 Security subset.

However, organizations must note [SE Labs testing](#) shows Microsoft Defender for Office 365 lacks the detection capabilities needed to stop today's advanced and targeted threats. In addition, testing performed by the Trellix Advanced Research Center from 4Q22-3Q23 confirmed Microsoft missed 3.1 million malicious emails across 1560 joint Microsoft/Trellix customers.

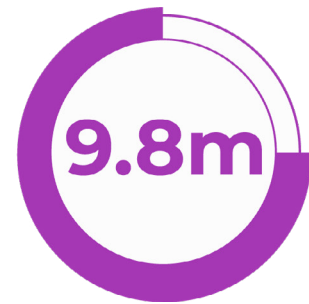

We Catch What Others Miss

Targeted attacks missed per year by Microsoft across 1560 customers

Targeted attacks missed per year by Proofpoint across 1107 customers

Targeted attacks missed per year by IronPort

Introducing Trellix Email Security for Office 365

Trellix Email Security for Office 365 provides a superior, more cost effective option to Microsoft Defender for Office Plan 2.

The Trellix solution consists of two industry proven solutions: [Trellix Email Security - Cloud](#) and [Trellix Intelligent Virtual Execution \(IVX\) for Collaboration Platforms](#).

Trellix Email Security delivers superior, multi-layered detection powered by cutting-edge machine learning, artificial intelligence, and security analytics providing unparalleled defense against multi-stage campaigns.

Trellix IVX for Collaboration Platforms extends protection from email to collaboration tools such as Sharepoint, Teams, and Slack ensuring people can work together securely across the extended enterprise.

Why Trellix Email Security?

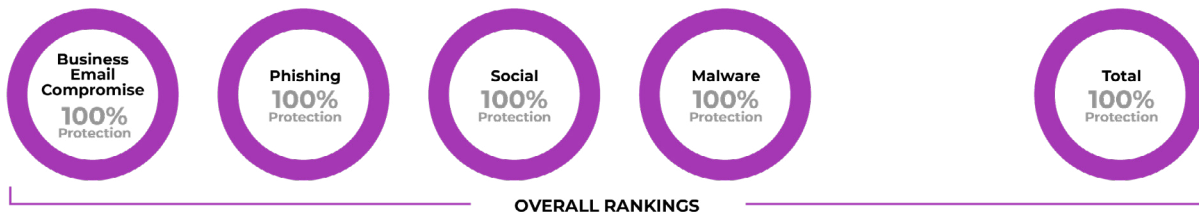

Trellix provides the industry's most comprehensive email and collaboration security solution.

Trellix Email Security was the only vendor to receive 100% in each of the [SE Labs testing categories](#), beating both Microsoft Defender for Office and Google Workspace Enterprise.

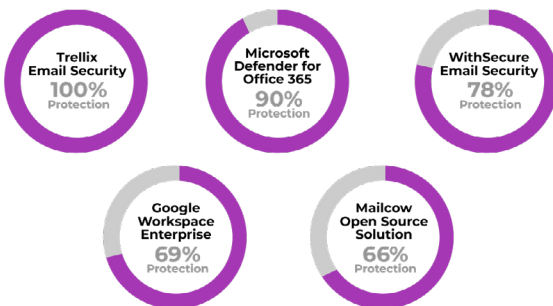

Integrated investigation and response ensure alignment with your overall security operations program. Features like auto remediation for Microsoft 365 automatically extract emails weaponized post-delivery.

Trellix Email Security is an integral part of the Trellix XDR platform. Trellix continuously monitors the threat landscape, correlating threat data gathered from more than 40k enterprise customers, technology partners, and service provider networks around the world, ensuring you stay ahead of known and emerging threats..

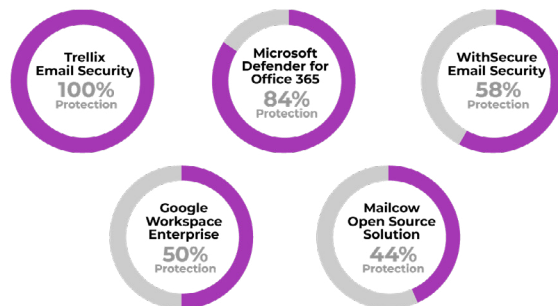

Trellix ranks #1 in SE Labs Report beating Microsoft and Google
